The Natural Choice for a Prosperous Future

Cytozyme's nutritional solutions effectively support all aspects of sustainability. Fueled by advanced science and 40 years of research, our products optimize the natural processes in plants, aid growth, and provide strength to resist external threats of abiotic and biotic stresses. Truly sustainable agricultural production protects and improves the natural environment, benefits society, and supports the profitability of growers and producers. With Cytozyme, sustainability is not a corporate slogan, but a philosophy that we adhere to for the good of our community and our planet.

"Cytozyme's philosophy is to listen to producers, growers, and their partners, and to address their constantly changing challenges of food production."

— Eric Baughman, CEO | Cytozyme

Putting Science to Work in the Hands of Producers

Research and Development has been the cornerstone of Cytozyme's growth. We develop innovative, ecologically-friendly technologies by maximizing expression of the natural genetic potential of organisms. Our proprietary multistage processes give us cutting-edge platforms to design a broad range of products by controlling formation of natural metabolites in cells. Our products target complex metabolic pathways which support the growth and development of organisms, resulting in improved crop, animal, and aquaculture production.

Our researchers come to Cytozyme from leading universities in the USA and Europe and deliver strong international expertise in core science disciplines. Our discovery processes are expanded and enriched through collaboration with leading scientists and research organizations worldwide.

From Lab to the Land: **Delivering Scientific Expertise**

Molecular Biology and Microbiology

Our genomic discoveries provide tools to design products enhancing specific metabolic pathways to maximize expression of natural genetic potential of an organism.

Physiology and Biochemistry

Our research targets crucial metabolic processes on all levels of biological organization from molecules and cells to whole organisms, providing a functional platform for the development of the next generation of products and solutions.

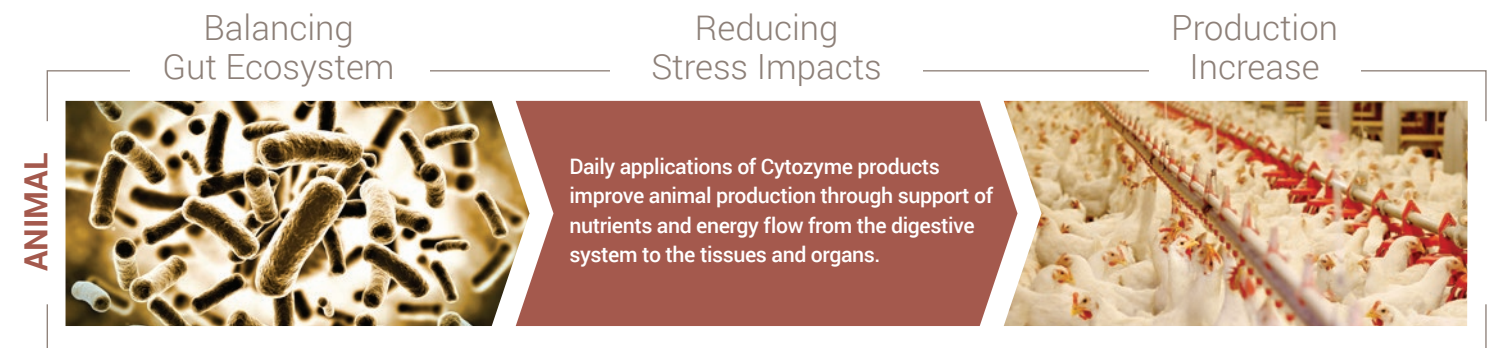

Agronomy and Nutrition

Our research focuses on proving performance of our products in the field, improving nutrient uptake and utilization, enhancing nutrition, supporting health of organisms, and introducing comprehensive solutions to growers and producers facing constantly changing challenges worldwide.

Analytical Chemistry

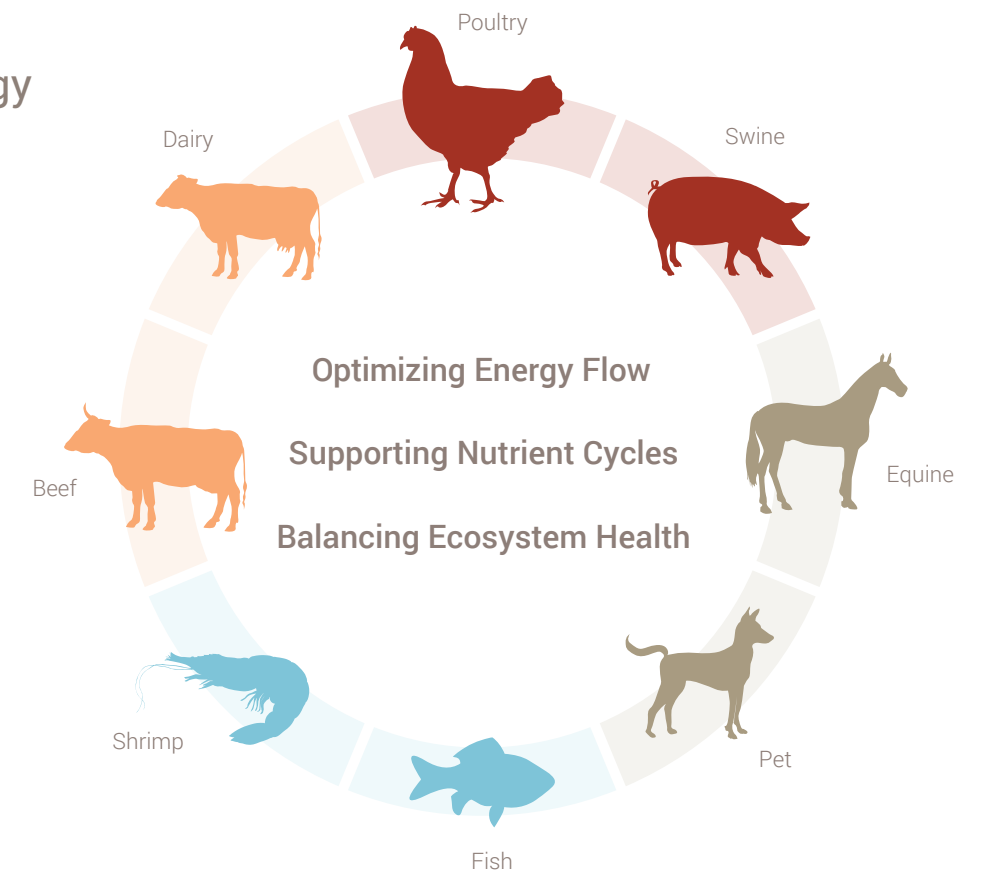

Our analytical investigations focus on verification of product performance in the laboratory and in field conditions, as well as on the support of our customers worldwide with continuous expansion of analytical capacities.

Maximizing the Natural Potential of Animals and Aquaculture

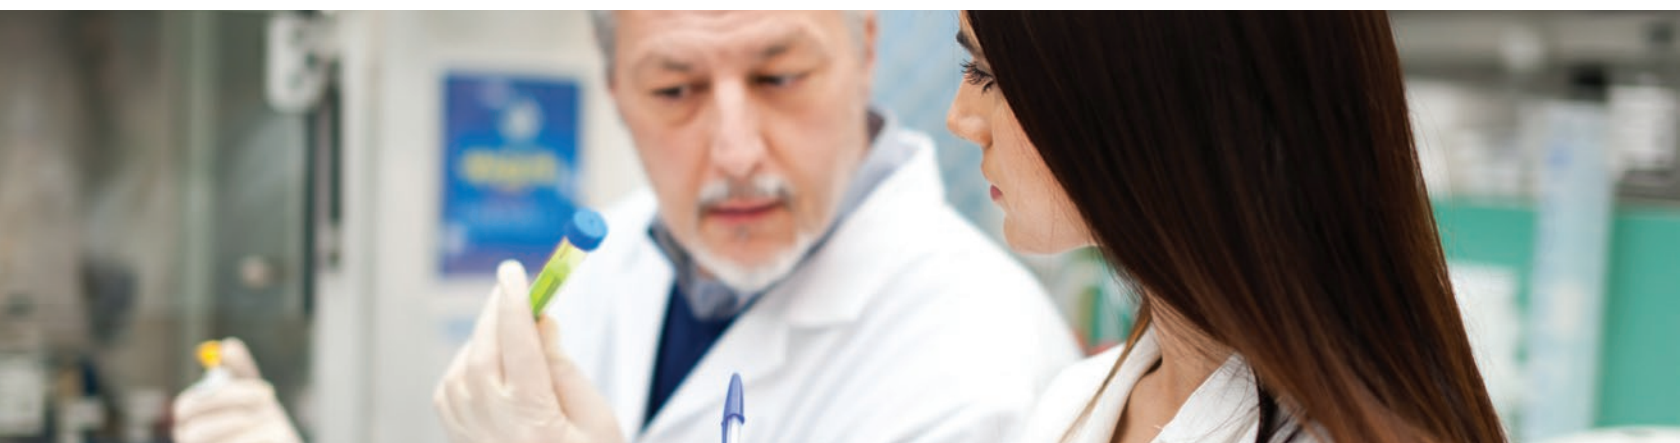

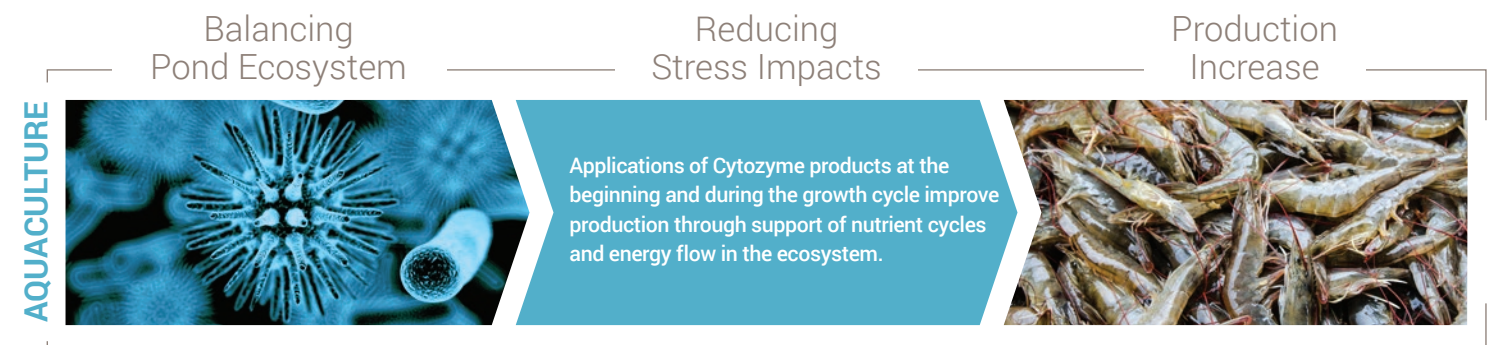

Animal Health Technology

Cytozyme's innovative technologies utilize naturally-derived multi-stage processes that combine the power of probiotic metabolites, chelated/complexed minerals, antioxidants, and plant extracts to support activity of beneficial microorganisms in the digestive tract. Gut health is crucial to ensure an optimal supply and utilization of nutrients. A balanced, stable gut environment leads to improved health and performance of animals resulting in better feed conversion, increased weight gain, and reduced mortality, especially during stressful conditions.

Pond Health Technology

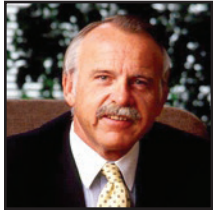

Cytozyme's unique, proven technology optimizes the aquaculture environment by promoting the natural balance in pond soils and supporting healthy, biologically-active ecosystems to maximize production.

Over 40 Years of Experience

Forty years ago, Steve Baughman founded Cytozyme with the firm belief that only advanced science and unwavering commitment to ethics and stewardship can feed a growing planet. His vision was that every man, woman, and child is entitled to the highest standards of living the environment has to offer. From day one, the Cytozyme team has dedicated research efforts to make that vision a reality. Four decades later our beliefs remain the same under CEO Eric Baughman.

Today, Eric Baughman and the Cytozyme team focus on the success of the global farming community. We accomplish that through a dedication of our scientific efforts to groundbreaking research and development of naturally derived products for optimal food production, grower and producer profitability, and environment health. Cytozyme is proud to be a provider of unique technology platforms and leading solutions focusing on improvement of plant and animal health. It is our firm belief that technology is the agricultural tool of tomorrow – the undisputed answer to meet the nutritional needs of a growing planet in the most sustainable manner.

Cytozyme's Pillars of Success

Development

We utilize science and nature to support sustainable food production. We are continuously developing and implementing new generations of innovative solutions by maximizing the expression of the natural genetic potential of organisms. Our dedicated and enthusiastic researchers deliver science from the lab straight into the hands of the growers and producers to facilitate healthy food supply.

Quality

Cytozyme's products are manufactured using the highest industry standards for superior performance in the field. Our new state-of-the-art facility is equipped with the most advanced Enterprise Resource Planning (ERP) management system, is run by a team of experts focused on supplying products of the highest quality, on-time delivery, and an unwavering commitment to the needs of our partners.

Care

We care about our customers' needs, values, and beliefs. As partners with growers, producers, and distributors worldwide, we are all one team working towards one vision. The service and support we provide are just as important as the products we supply. Our highly skilled business managers and technical support teams travel the world listening to farmers, learning about the issues and problems they face to find solutions, and satisfy the diverse needs of a global marketplace.
